Introduction:

Our app provides an interactive map allowing users to share their location with friends and set a meetup point.

Requirements:

The application is accessible through the following platforms:

- iOS (web-app)
- Android (native)
- Windows/Mac OS X (web-app)

User guide:

Create a JoinUp:

When you first go to joinup.nu you will be prompted with a welcome screen. You may choose to login/register (for additional features) or skip and create a JoinUp straight away.

You pin:

The service will detect the location of an user. The user will be shown with 'YOU' pin.

Selecting meetup area:

The circle of the map indicates the general area where an user is at. An user can move a map around to create a meetup. Once the meetup is created, specific meeting point can be put on the map.

Meetup Pin:

Meetup pin exists to indicate where users should meet. Meetup Points can be decided either before the creation of meetup or after the creation of meetup.

Leave Meetup :

Users can leave meetup through leave meetup button

ShareURL:

Users can invite their friends via sharing button. When clicking, the url of map will be copied and users can send invitations to an existing map.

Login:

Users can login to the service. When logged in, users can update their profile picture. They also can set up their nickname. The profile picture is linked to their gravatar account. If a gravatar image of an user exists, it will show up in its corresponding pin. If not, a default pic will show. If an user chooses not to log in with our service, the name will show up in the pin.

Profile:

When clicking a profile section, users can update their status. When typing his or her status, other users who have joined the map will be able to see newly updated status by clicking a corresponding pin.

People:

Users can see other users in the existing map by clicking a people menu. List of users will show.

Directions:

Next to the people's list, direction button exist to inform users with directions to either an user or a meetup point.

Colors of Pin:

Colors of pin reflect the updates of each users. Once the user is on live on the map, that user's pin will show green. Once the user is not active for a while, it will change its color to yellow and the color will change to red once the user has been inactive for more than 20 min.

Email verification:

Once a user is registered, the service sends an email to corresponding email to verify. Once clicked on 'Verify', it will redirects to the landing page.

Settings & privacy:

Users can choose not to share their locations using a toggle switch. Once putting a toggle switch to off, users' locations will not be shared with other users who joined the map.

Type your name:

If an user chooses not to log-in with our service,, the user can choose a name to be shown on the map. The user's name will reflect in its corresponding pin.

Status:

Users can post their status. Status can be changeable clicking its profile section in our menu. When clicking a pin of an user on the map, status will show up.

Search for a location :

Users can find a location to choose a meetup points.
